Time Complexity Analysis:

Operation	Time Complexity
Add	$O(1)$
Search	$O(n)$
Traverse	$O(n)$
Delete	$O(n)$

Limitations of Arrays:

1. Fixed size.
2. Costly insertion and deletion.
3. Memory wastage if array is underutilized.
4. Cannot grow dynamically.

When to Use Arrays:

Use arrays when:

- Number of records is known beforehand.
- Frequent index-based access is required.
- Memory efficiency is important.
- Dataset size is relatively small and fixed.
